SCHÖNBUCH MEASURING SERVICE

Schönbuch now offers a bespoke measuring service for its CABIN storage system. Included in the service is the measurement of the entire room, including the ceilings and all other relevant details, with 3D laser technology that's accurate to within a millimetre. The measuring and CABIN planning service is simple to book: just contact your personal Schönbuch representative or our production partner Ress Möbelwerkstätten, and we will arrange an appointment directly with the customer within 8-10 working days. What's more, because the measurements are taken by our experienced service technicians, they are guaranteed to be accurate and provide a suitable basis for planning the perfect, custom-made CABIN. This service is currently available in Belgium, Germany, Luxembourg, the Netherlands, Austria and Switzerland.
